

Interested in Saving Your Healthcare Facility Money?

Discover these unique ways to cut costs without compromising patient care

With rising energy costs straining tight budgets, healthcare facilities are seeking ways to cut costs without compromising quality of patient care

Healthcare systems spend **more than \$10 billion** on energy annually. That's enough to cover the average salary of more than 100,000 registered nurses

Compared to the average commercial building, healthcare facilities are **2.5 times** more energy intensive

74.4% of the energy consumed in healthcare facilities is generated from HVAC, hot water and lighting systems

Overall cost reduction and efficiency is one of the **top two financial priorities** among (healthcare) CEOs

Effective maintenance can reduce HVAC energy costs by **5-40%**

For every **\$1** spent on energy efficient upgrades, healthcare facilities save an average of **\$20-\$50**

Where can healthcare facilities potentially save money?

- 10%** on retrocommissioning
- 15-20%** on proper preventative maintenance
- 5-15%** on regular filter changes
- 15-20%** on lighting control and retrofits
