

The Power to Deliver True Healthcare Technology Management

Your medical technology depends on your electrical infrastructure. Best practices in protecting equipment, results, and patient outcomes treat the system as a whole.

Healthcare Technology Management

- Inventory management
- HTM cybersecurity
- Medical device security assessment
- Risk and vulnerability assessments
- Clinical systems and PACS
- Medical device integration and interoperability challenges
- Service contract management
- Wireless systems support and bandwidth management
- Inventorying and cataloguing of clinical IT configurations
- IEC 80001 compliance
- Management of distributed systems

Electrical Power Solutions

Electrical Asset Management Program

- Life cycle assessment and proactive management
- Testing, maintenance, engineering, modernization, and replacement

Acceptance Testing, Startup & Commissioning

- NETA certified technicians and engineers
- NFPA 70E and 70B, NETA, OEM, and industry standards

Engineering Services

- NFPA 70E arc flash studies
- Short circuit and coordination studies

Power Quality Services

- Harmonic design studies and investigations/analysis
- Load survey and ampacity measurement
- Power factor analysis

Reliability & Maintenance Services

- Reliability testing
- Inspection, maintenance, testing, and calibration for low, medium, and high voltage equipment

Emergency System Services

24-Hour availability

Upgrades, Modernization & Life Extension Services

Including critical equipment

Personnel Safety Training

Compliant with NFPA 70E, 70B, and OSHA standards

For Certified Techs in Both Healthcare Technology and Electrical Assets
