

Are You Spending on the Symptom, Not the Cause?

Just like systems in our bodies, healthcare equipment and facility assets are interdependent. Better protect equipment and patient outcomes by treating your medical technology and your power infrastructure as a whole.

What Is Power Quality?

These power quality issues can damage equipment and results.

1

Voltage Sags:
Dips in power

2

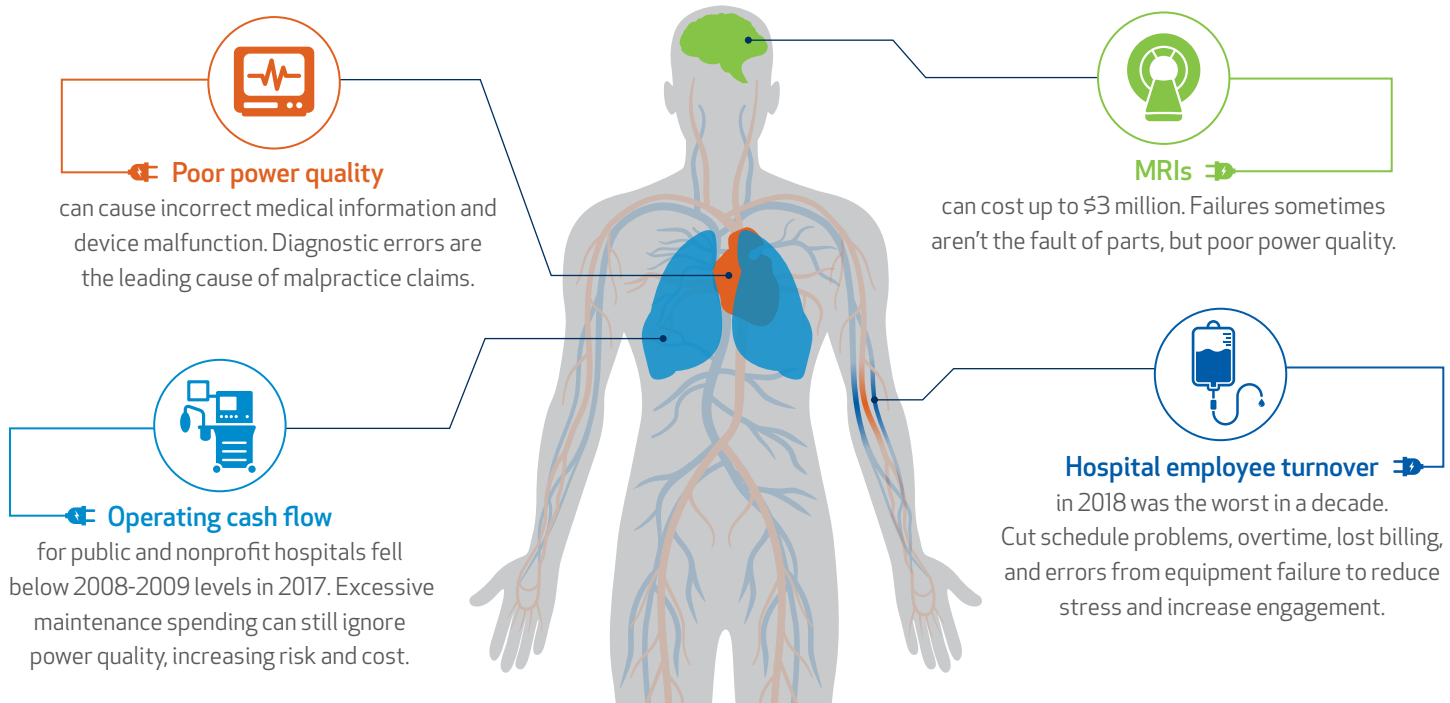

Voltage Transients:
Spikes or surges in power

3

Harmonics:
Disruptive distortions of power

Why Treat Healthcare Technology and Power Quality Together?

Medical equipment is susceptible to power quality issues and is often the source of non-linear loads that cause those issues.

Does Your Healthcare Technology Management Strategy Include Power Quality?

Ours Does.

ABM fields highly skilled technicians in healthcare technology and electrical systems. Our teams can diagnose and correct power quality issues, reducing impact on your medical technology. We also assist with **OSHA**, **NFPA 70E** and **70B**, and **Joint Commission Compliance** for electrical power assets.

Call the **ABM.com** Team at **866.624.1520**
